Restrictions and Stage Limitations are the Past

YOU'RE LOOKING AT THE FUTURE

Maximizing well production in unconventional reservoirs has long been an industry goal. Now it's reality. The Elect™ monobore-free sleeve system allows for an unlimited number of stages with minimal to no casing ID restrictions. This intelligent, programmable system optimizes reservoir contact and reduces service cost by offering more stages, longer laterals, more operational options, and less intervention. There is a reason we are still outperforming the competition — while others are talking about the future, we are pioneering it. To learn more, contact your local Halliburton representative.
